

# Radiation Training On-Line

Both network version and local installation files are provided in the locations shown below. The network version allows one person at a time to open and run the training materials from any Windows PC on the network without installing the files on the local computer. The local version installs all the necessary files to run the materials on the local computer. Installing them locally is generally recommended for computers in labs where new people need to be trained.

## **Plantpath:**

### **Network version:**

x:\Public\Training\RadiationTraining

### **Local installation (install on local computer):**

x:\Public\Training\Setup.exe

### **To map a drive:**

\\plantpath\user\public\training

### **To run the network version:**

Navigate to the appropriate location above and double click the RadiationTraining shortcut.

### **To install the files locally:**

Navigate to the appropriate location shown above and double click the Setup.exe file. Once installed, run the Radiation Safety program from the Start Menu.

To run the program, you must have speakers.

Contact Arthur Selman (2-5748) with questions or problems about the running or installing the program.
