

THREE APPROACHES to collecting soil samples.

Collect 15-20 (or more) 1-inch-diameter core samples, 8 inches deep for every 20 acres. Mix the cores well, put the mixed soil into a soil sample bag and send it to an SCN testing lab.

1 Collect soil cores using a zigzag pattern.

2 Collect soil cores from logical areas or management zones in the field.

3 Collect soil cores from high-risk areas in the field where SCN might first be discovered.
